Sustainable development strategies at local level -Study case “Dumbrava Narciselor”, Brasov, Romania-

Comana-Parau-Sinca-Sinca Noua-Sercaia-Mandra

Scientific study about sustainable development strategies at local level

- The effective protection of the environment
- The rational use of the natural resources in the area
- The maintenance of a sustainable level of economic growth and employment
- Protecting and developing the cultural heritage
- Development of tourism (in all forms in the area)

Research Questions

The aim of the elaboration of the strategy for sustainable development of the villages from “Dumbrava Narciselor”, Brasov county-Romania, is to provide to local administration authorities, economic operators, public institutions and NGOs (to the entire community), the guidelines for meeting the overall purpose of social and economic development of the villages for happiness and prosperity along with climate changes.

Methods

Empirical sociological research with questionnaire method, included aproximative 700 participants from three categories: Citizens, NGO's, and private sector (managers).

Results are five major directions:

- I:** Programs for economical and social development, free initiative, budget, finance, management of the public and private domains of community, the public services, eco-tourism, trade ;
- II:** Organization, development and rural planning, achievement of the public works, environmental protection, conservation of historical monuments and architecture;
- III:** Legality in the local public administration, defence of public order, respect for citizens' rights and freedoms, transparent decision-making, a public relations exercise
- IV:** Scientific activities, education, health, culture, social protection, sports and leisure ;
- V:** Activities of representation in domestic and international relations, promoting the image and interests of the villages and the inter-communitarian development association .

Similarities and differences between topics / papers

Measures in the strategy, allowed the identification of more than 160 tactics for each of the six villages that were quantified taking into account the views of all those living in the geographical area. Application of these measures will result in protecting the environment, including flora and fauna, and preserving for future generations, the beauties of Carpathian garden .
